SUNIL SHEKHAWAT

Full Stack Engineer | Node.js · React · AWS · Docker · MongoDB · Redis

+91 9925512382 | sunilshekhawat772@gmail.com | linkedin.com/in/sunil-shekhawat | India

PROFESSIONAL SUMMARY

Full Stack Engineer with 2 years of hands-on experience building production-grade backend systems and cloud infrastructure. Specialised in Node.js, MongoDB, and AWS — with a proven record of designing RESTful APIs, slashing database query load by 60% through Redis caching, containerising applications with Docker & Docker Compose, and deploying secure multi-tier architectures on AWS (EC2, VPC, Route 53, Auto Scaling, S3, ALB). Also experienced in React.js front-end development with Redux Toolkit, RTK Query, and Context API. Focused on system performance, clean architecture, and delivering measurable outcomes.

TECHNICAL SKILLS

Backend	Node.js, Express.js, REST API Design, JWT Auth, Socket.IO, Joi Validation
Frontend	React.js, Redux Toolkit, RTK Query, Context API, Ant Design, Tailwind CSS, JavaScript (ES6+)
Databases	MongoDB (Advanced — Aggregation, Indexing, Transactions), SQL (Intermediate)
Caching	Redis (Caching, OTP Store, Session Blacklisting, Pub/Sub, Sets, Hashes)
Cloud – AWS	EC2, S3, VPC, Subnets, Route 53, NAT Gateway, Internet Gateway, Security Groups, NACL, ALB, NLB, Auto Scaling, VPC Peering, Multi-AZ Backup
DevOps	Docker, Docker Compose, Multi-Stage Builds, Docker Volumes, PM2, Nginx
Logging	Winston, DailyRotateFile, Morgan
Security	Helmet, HPP, XSS-Clean, Mongo-Sanitize, Rate Limiting, Encrypted JWT
Tools	Git, GitHub, Postman, VS Code, Firebase, Twilio, AWS CLI
Concepts	API Gateway (Conceptual), Microservices Patterns, RBAC, OTP Flows, Graceful Shutdown, PM2 Cluster Mode

WORK EXPERIENCE

Full Stack Engineer | **Webbrains Technologies** | Vadodara, Gujarat *Apr 2024 – Present*

- Architected and maintained production Node.js/Express backends serving live clients across Australia, India, Canada, and the Middle East.
- Delivered Redis caching layer (OTP store, session blacklisting, master-data cache, user-tracking) — cut average database query load by ~60% on high-traffic endpoints.
- Containerised the full stack with Docker & Docker Compose using multi-stage builds, cutting image size by ~40%; managed production processes via PM2 (cluster mode, auto-restart).
- Provisioned AWS infrastructure: VPC with public/private subnets, NAT Gateway, Internet Gateway, Security Groups, NACL, Route 53, EC2 Auto Scaling, ALB, and cross-region backups.
- Configured SSL termination and reverse-proxy routing via Nginx, enabling zero-downtime production releases.
- Developed RBAC supporting 5 user roles with granular module-level permissions (view/add/edit/delete), cached in Redis for sub-millisecond auth checks.
- Launched OTP service (email + SMS) with Redis-backed expiry, 3-attempt limit, and automatic key cleanup.
- Established paginated, filterable REST APIs across 10+ modules with Joi validation and centralised error handling.

KEY PROJECTS

BuildFix – Structural Repair Management System | *Node.js, MongoDB, AWS S3, Firebase* | *Australia*

- Designed end-to-end pipeline — campaign lead capture, site-visit scheduling, PDF quotation generation, and digital contract signing — cutting manual admin time by ~50%.

- Created automated slot-selection scheduling; team accept/reject actions trigger next-available-date workflows, SWMS compliance tracking (auto 6-month review), and timesheet management powering city-wise analytics dashboards.
- Produced itemised quotation module with negotiation and discount-approval flows.
- Secured file storage (photos, reports, contracts) in AWS S3 with role-based access scoped to technicians and managers.

Cure and Care – Healthcare & E-Commerce Platform | *Node.js, MongoDB, Payment Gateway*

- Served 500+ patients monthly across 50+ doctors (online/offline) and a 200+ lab test catalogue.
- Processed Rs. 2+ lakh/month in transactions, achieving 99.8% payment success rate across 1,000+ payments.
- Reduced appointment booking time by 70% versus the legacy phone-based process.

IP Tutorials – Student Management System | *Node.js, MongoDB, Socket.IO* | *May–Nov 2025*

- Supported 600+ students across attendance, exams, results, and academic activity management.
- Integrated Socket.IO real-time chat for 30+ teachers, 20+ admins, and the super admin.
- Structured 10+ Mongoose models with JWT auth and RBAC middleware across 5 user roles.

Other Notable Projects

- The Big Picture (Canada) — Student-coach platform; 200+ students, 50+ coaches, 1,000+ monthly assignments at 95% completion, real-time chat at <100ms latency, 800+ monthly sessions.
- JivanOil — Mobile-app-based e-commerce platform with full order lifecycle managed via admin panel (catalogue, fulfilment, delivery).
- TelMed (Canada) — Healthcare platform with patient appointments, health-card management, province-wise dynamic pricing, and doctor/pharmacy panels.
- GSquared — CA firm platform for GST, PF, and CA services; task tracking, performance monitoring, reminders, and role-specific panels (super admin, manager, team).
- WhatsApp Marketing — Bulk messaging tool using WhatsApp Business API for targeted campaign delivery and analytics.
- ShippingPost — Logistics platform with real-time shipment tracking and multi-courier integrations.

AWS & DEVOPS HIGHLIGHTS

- Planned multi-tier VPC: public subnet (ALB) for ingress, private subnet (app + DB) for isolation; Security Groups and NACLs restrict DB access to application-tier IPs only — zero public DB exposure.
- Managed Route 53 with health checks and failover routing; EC2 Auto Scaling behind ALB handles traffic spikes; cross-region backups and Multi-AZ setups ensure near-zero RPO recovery.
- Reduced Docker image size ~40% via multi-stage builds; orchestrated with Docker Compose using named volumes, 512 MB RAM cap, 0.5 vCPU limit, and container health checks.
- Operated Nginx for SSL termination and upstream proxying to Node.js; maintained zero-downtime releases with PM2 cluster mode, rolling restarts, and log rotation.
- Hardened infrastructure by allowing only app-subnet IPs to reach database ports and routing all outbound traffic through NAT Gateway — no direct internet access from private subnets.

EDUCATION

Bachelor of Computer Application (BCA) *2020 – 2023*

Sardar Patel University, Anand, Gujarat | **CGPA: 8.87 / 10.0**
